

**Another great training opportunity  
brought to you by Smart Solutions Inc!**

## **Developing With Google Earth**

**Wednesday, June 10th**

**8:00am – 11:30am**

Google Earth lets you fly anywhere on Earth to view satellite imagery, maps, terrain, 3D buildings, from galaxies in outer space to the canyons of the ocean. You can explore rich geographical content, save your toured places and share with others! Utilizing modern programming tools, geographical information can be dynamically displayed using Google Earth for presentation. This training session will provide an overview of Google Earth's capabilities plus give examples of how programmers can design and develop applications to dynamically interact with Google Earth using KML (Keyhole Markup Language) files.

Managers and developers will find this training useful in understanding the capabilities of Google Earth in providing a rich presentation of geographical data. Both amateur and professional programmers will benefit from the application examples demonstrated. You'll come away from the workshop with valuable skills you'll be able to use immediately.

What can you do?
